Research Interests

My research centers on scientific machine learning, aiming to develop *scaling principles for scientific systems*–principles that remain largely absent from current foundation models and are essential for unlocking the full potential of AI for Science. My work spans three main directions and has received over 18,000 citations:

1. Science-grounded backbones: Autoformer (NeurIPS 2021), Corrformer (NMI 2023), Transolver (ICML 2023).
2. End-to-end scientific foundation models: TimesNet (ICLR 2023), Unisolver (ICML 2025), GeoPT (arXiv 2026).
3. Efficient scientific learning systems: Flowformer (ICML 2022), Transolver++ (ICML 2025), FlashBias (NeurIPS 2025).
